Hyamira®

Soft-Basic-Forte

A new generation of cross-linked hyaluronic acid fillers

Hyamira is a sterile, highly tolerated, viscoelastic filler made with cross-linked hyaluronic acid, ideal for subcutaneous applications.

Hyamira helps to increase the volume of the dermo-epidermal tissue thanks to the natural ability of hydrophilic hyaluronic acid molecules to attract a moderate amount of water molecules and bond with them.

This allows the integration of the intercellular matrix, whilst filling intradermal spaces and making the tissues firmer. The cross-linked hyaluronic acid contained in the product makes this filling effect longer lasting and more stable, the skin slowly absorbs Hyamira in 6 to 8 months, looking more natural for longer.

Hyamira Soft

Treatment of periorcular wrinkles

Hyamira Basic

Treatment of perioral wrinkles and for lip and eyebrow contouring

Hyamira Forte

Treatment of medium to deep face wrinkles, volume augmentation of cheekbones, chin, nose bridge and lips
